Elevate Your Composite-to-Steel Installations

Solutions for an Efficient Steel-Framed Deck

(800) 999-5099
strongtie.com
Engineered for Faster, Cleaner Installations

The Deck-Drive DCSD Composite-to-Steel screw has been specially designed to fasten composite decking to steel and aluminum deck-frame systems using the Simpson Strong-Tie® Quik Drive® system. Now decking can be fastened from a standing position with an auto-feed system that speeds installation and provides a clean, finished appearance.

- Engineered for performance, the DCSD’s patent-pending screw shaft and point drive easily through both composite decking and double 14 ga. steel box beam without predrilling.
- The Quik Drive PRO300S auto-feed screw driving system holds the screw securely as it drills through metal joists for a more consistent installation.

Features

- **#3 drill tip** provides fast self-drilling
- **Unique fluted pilot point** clears steel material
- **Quik Guard® coating** provides corrosion resistance for exterior use
- **Helical cutters** for easier tapping
- **Inverted upper threads** clear excess decking material to ensure the screw is seated properly and consistently
- **Cap-head** prevents mushrooming and decking material from rising up above the deck level, creating a smoother, clean-looking installation
- **Color matched to blend with most major composite decking products**
  - Brown 01
  - Tan 01
  - Gray 01
  - Red 01
  - Gray 04
  - Tan 02

Screw design is patent pending.
Approved fastener (by Trex) for Trex® Elevations™.
Save Time and Money with Faster Installation Speeds and Consistent Performance

The Quik Drive PRO300S Decking system is ideal for driving collated Deck-Drive™ DCSD Composite-to-Steel screws. Stand-up driving allows for improved labor-savings with less user fatigue and better consistency.

The PRO300S Decking System Includes:
• PRO300S Decking attachment (also sold separately)
• Extension for stand-up driving
• Decking nose clip for consistent screw placement
• Quiver for keeping screws at your fingertips
• Sturdy tool case
• Choice of Makita® or DeWalt® screwdriver motors
• Lifetime warranty
  (see strongtie.com/warranty for more information)

DeWalt and Makita are trademarks of their respective companies.

Non-skid teeth are reversible and replaceable

Collated Strip of DCSD screws holds fasteners uniformly
  U.S. Patent 7,051,875

Fasten Simpson Strong-Tie® Connectors to Trex® Elevations™ Framing

The Strong-Drive XE Exterior Structural Metal screw is the only fastener load-rated for Simpson Strong-Tie connectors used with Trex Elevations steel deck framing. This new #10 x ¾", hex-head, Quik Guard®-coated screw has undergone a dual-hardness heat treatment not utilized in standard self-drilling screws. The tip is hardened to facilitate drilling efficiency. The load-bearing, threaded shank is kept at a lower hardness to ensure that it is ductile and less prone to failure due to hydrogen embrittlement.

Features

- Dual-hardened heat treatment provides resistance to hydrogen-assisted failure
- Meets ASTM C1513 drill-time performance
- Load-rated in LS70Z and L70Z
